

PRODUCT / PHOTO

PEDICURE GELÉE with urea PSP200

PRODUCT CONCEPT

For softening calluses from the feet. The added Urea activates the natural mechanisms for removing dead cells and helps remove them mechanically. Pedicure gelée does not disrupt the natural barrier functions of the skin.

Key product components:

- **Urea** – the high percentage provides a powerful keratolytic effect;
- **Glycerin** – provides maximum hydration and moisture retention in the skin.

APPLICATION

Apply a proper amount of the Gelée to fully cover the calloused area. Wrap the feet in a plastic bag for 10-15 minutes. Remove the product residue with a napkin and file the softened area.

It is advised to use a pedicure scrub after the procedure, after which rinse the feet off.

INGREDIENTS

Aqua, Urea, Propylene Glycol, Glycerin, Ethoxydiglycol, Sodium Polyacrylate, Lauryl PEG/PPG-18/18 Methicone, Phenoxyethanol.

CONSUMPTION

250 ml bottle with a pump - enough for at least 24 cosmetic pedicure procedures.
